

BIODICAPT
Research Network
~ 125 points collected

Fit model to observations
(HMSC, GJAM, other JSDM...)

Which points
to sample
next?

Budget: 50 k€

~150 points (AudioMoths) or
~50 points (SM Mini Bat 2)

OED loop

Select
50-150 points

Based on the parameters
of the initial model

Simulate observation of
species for these points

Fit model to all
observations (old + new)

Evaluate cost function
(uncertainty, entropy, etc.)

Cost function
minimised?

No

Yes

OED reached
Selected points are the best
choice for new observations

500 ENI
Participatory Science network
~ 500 points available
